

**Extension Hour**

# Using CDI and Extensions to make a better Java EE

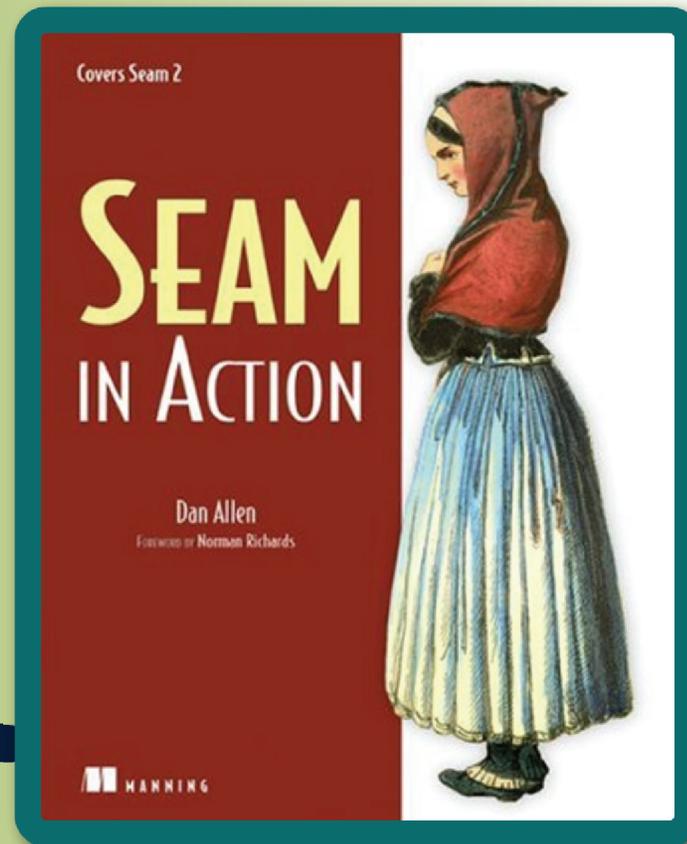

**Dan Allen**

Principal Software  
Engineer

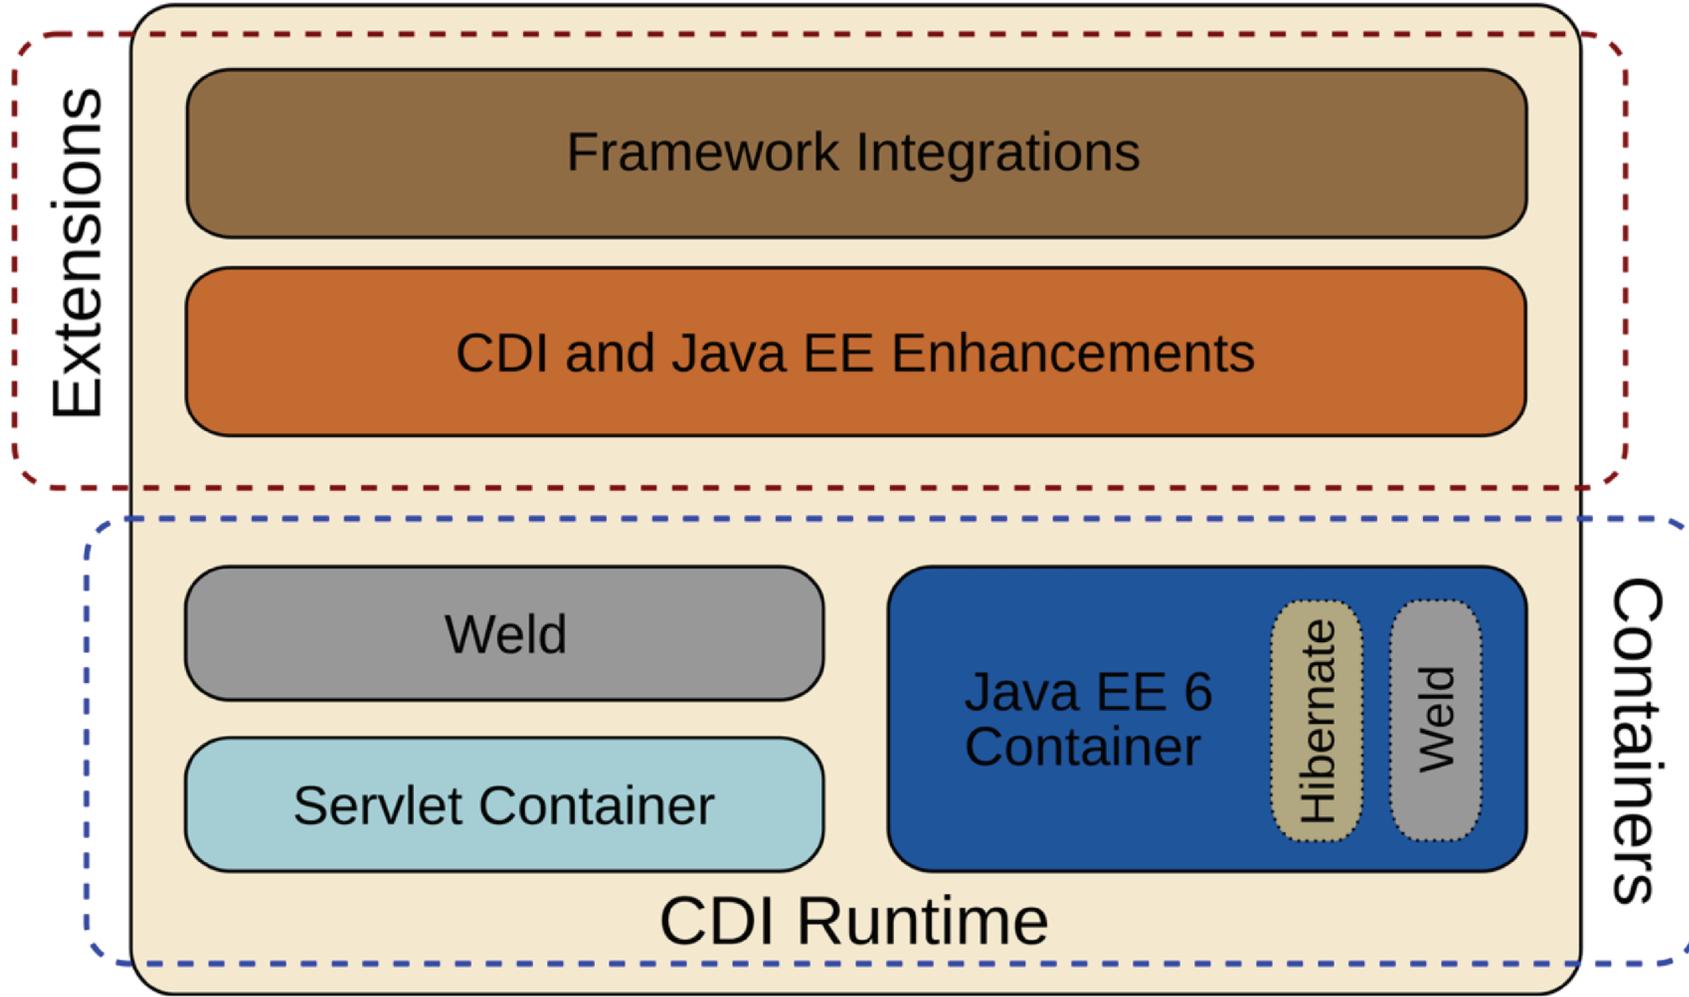

Seam Community Liaison

**JBoss  
Community**

@mojavelinux

# Building on common ground

**Contexts and Dependency Injection for  
the Java EE platform**

**The quick and  
dirty version,  
please.**

**What can **CDI** do for me?**

CDI can

**manage** a bean's lifecycle

**inject** dependent beans

**bind** a bean to its context and name (if provided)

**Bean class**

**Set of bean types**

**Set of qualifiers**

**Scope**

**Bean name (optional)**

**Set of interceptor bindings**

**Alternative classification**

A woman with dark brown hair and bangs is peering over a white rectangular sign. She is looking directly at the camera with a neutral expression. Her hands are visible at the top edge of the sign, gripping it. The background is a plain, light-colored wall.

**"When is a bean  
recognized?"**

# "How are injections resolved?"

Types

Type parameters

Annotations

Method signatures

"What makes CDI  
different?"

**STANDARDIZED**  
**TYPE-SAFE**  
**EXTENSIBLE**

**"All we have to decide is  
what to do with the beans  
that are given to us."**

CDI also provides

bean producers

bean alternatives

an event notification  
model

semantic interceptor  
bindings

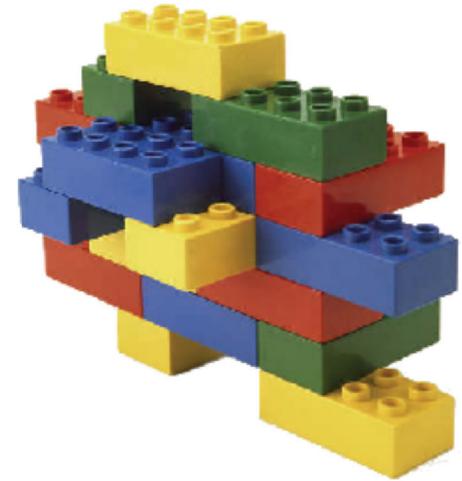

bean decorators

**Portable extensions**

# SPI for hacking Java EE to:

- ✓ register additional beans
- ✓ satisfy injection points
- ✓ introduce custom scope and context bean store
- ✓ augment or override bean metadata

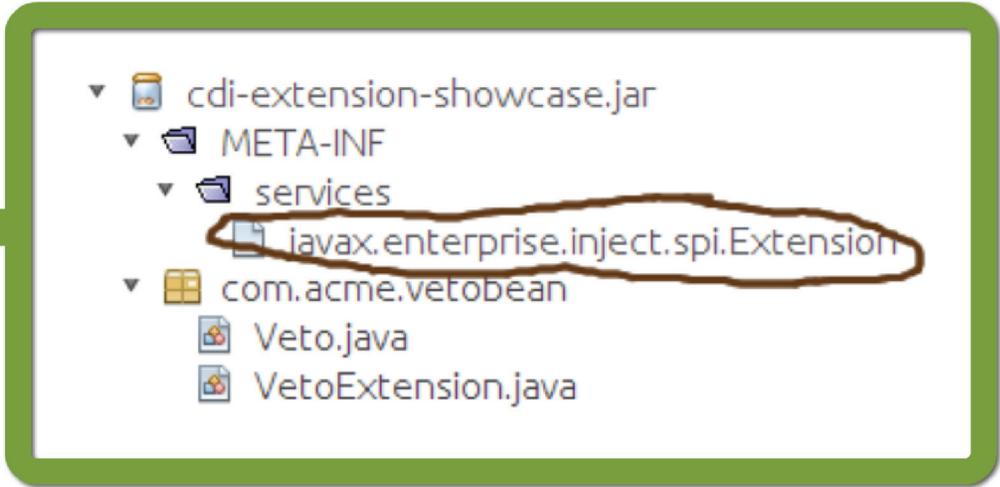

# "How does it work?"

**Based on Service Provider Interface (SPI) pattern**

- 1** Implement empty Extension interface
- 2** Observe container events to alter deployment
- 3** Register extension

A woman with dark brown hair and bangs is peering over a white rectangular sign. She is looking directly at the camera with a neutral expression. Her hands are visible, gripping the top edge of the sign. The background is a plain, light-colored wall.

**"When is an extension  
recognized?"**

```
▼ cdi-extension-showcase.jar
  ▼ META-INF
    ▼ services
      ◯ javax.enterprise.inject.spi.Extension
    ▼ com.acme.vetobean
      ◯ Veto.java
      ◯ VetoExtension.java
```

META-INF/services/javax.enterprise.inject.spi.Extension

com.acme.vetobean.VetoExtension

Bean

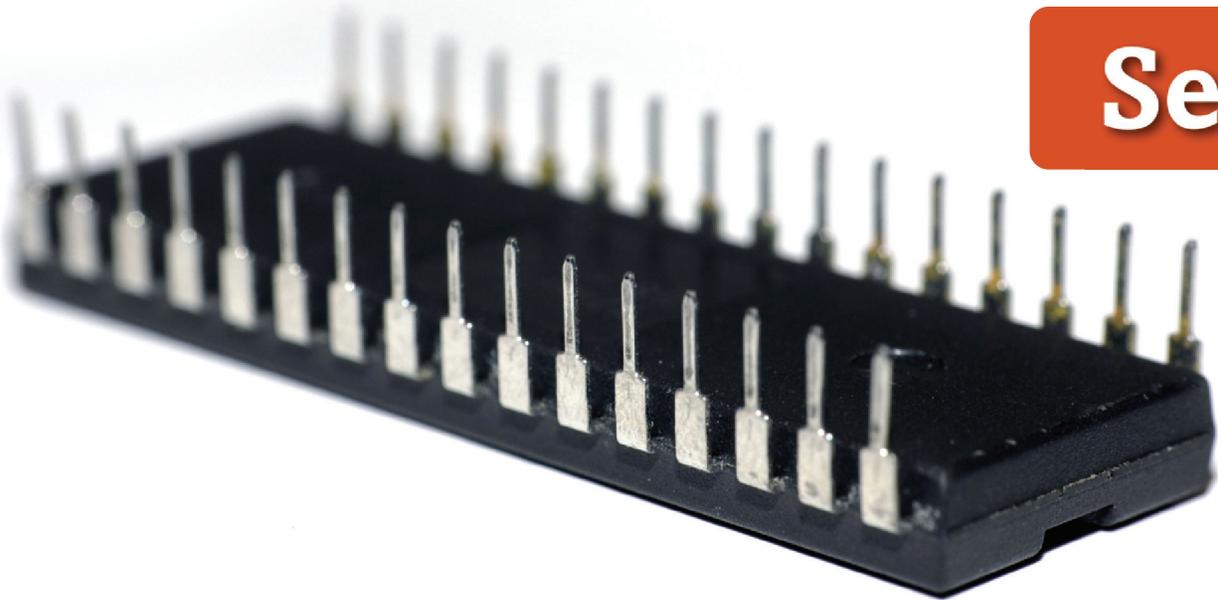

**Ah, but can  
we test it?**

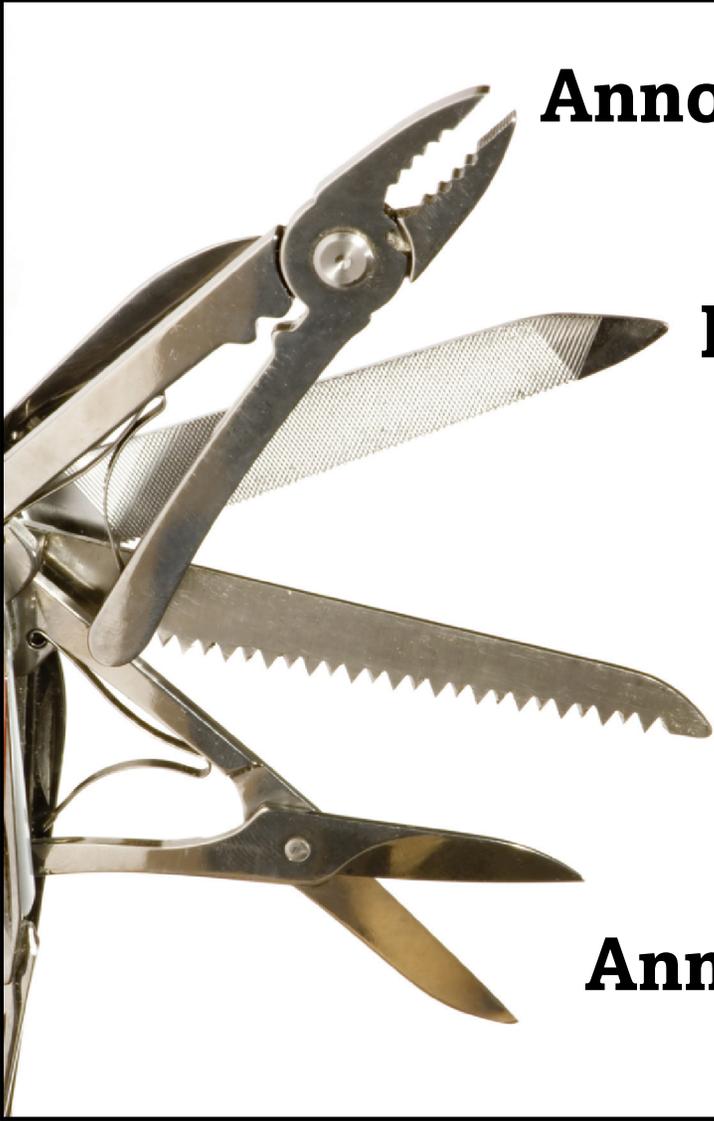

**A testing framework for CDI (and more)**

## Seam Solder

**Generally useful stuff for CDI programming, extension authoring and framework integrators**

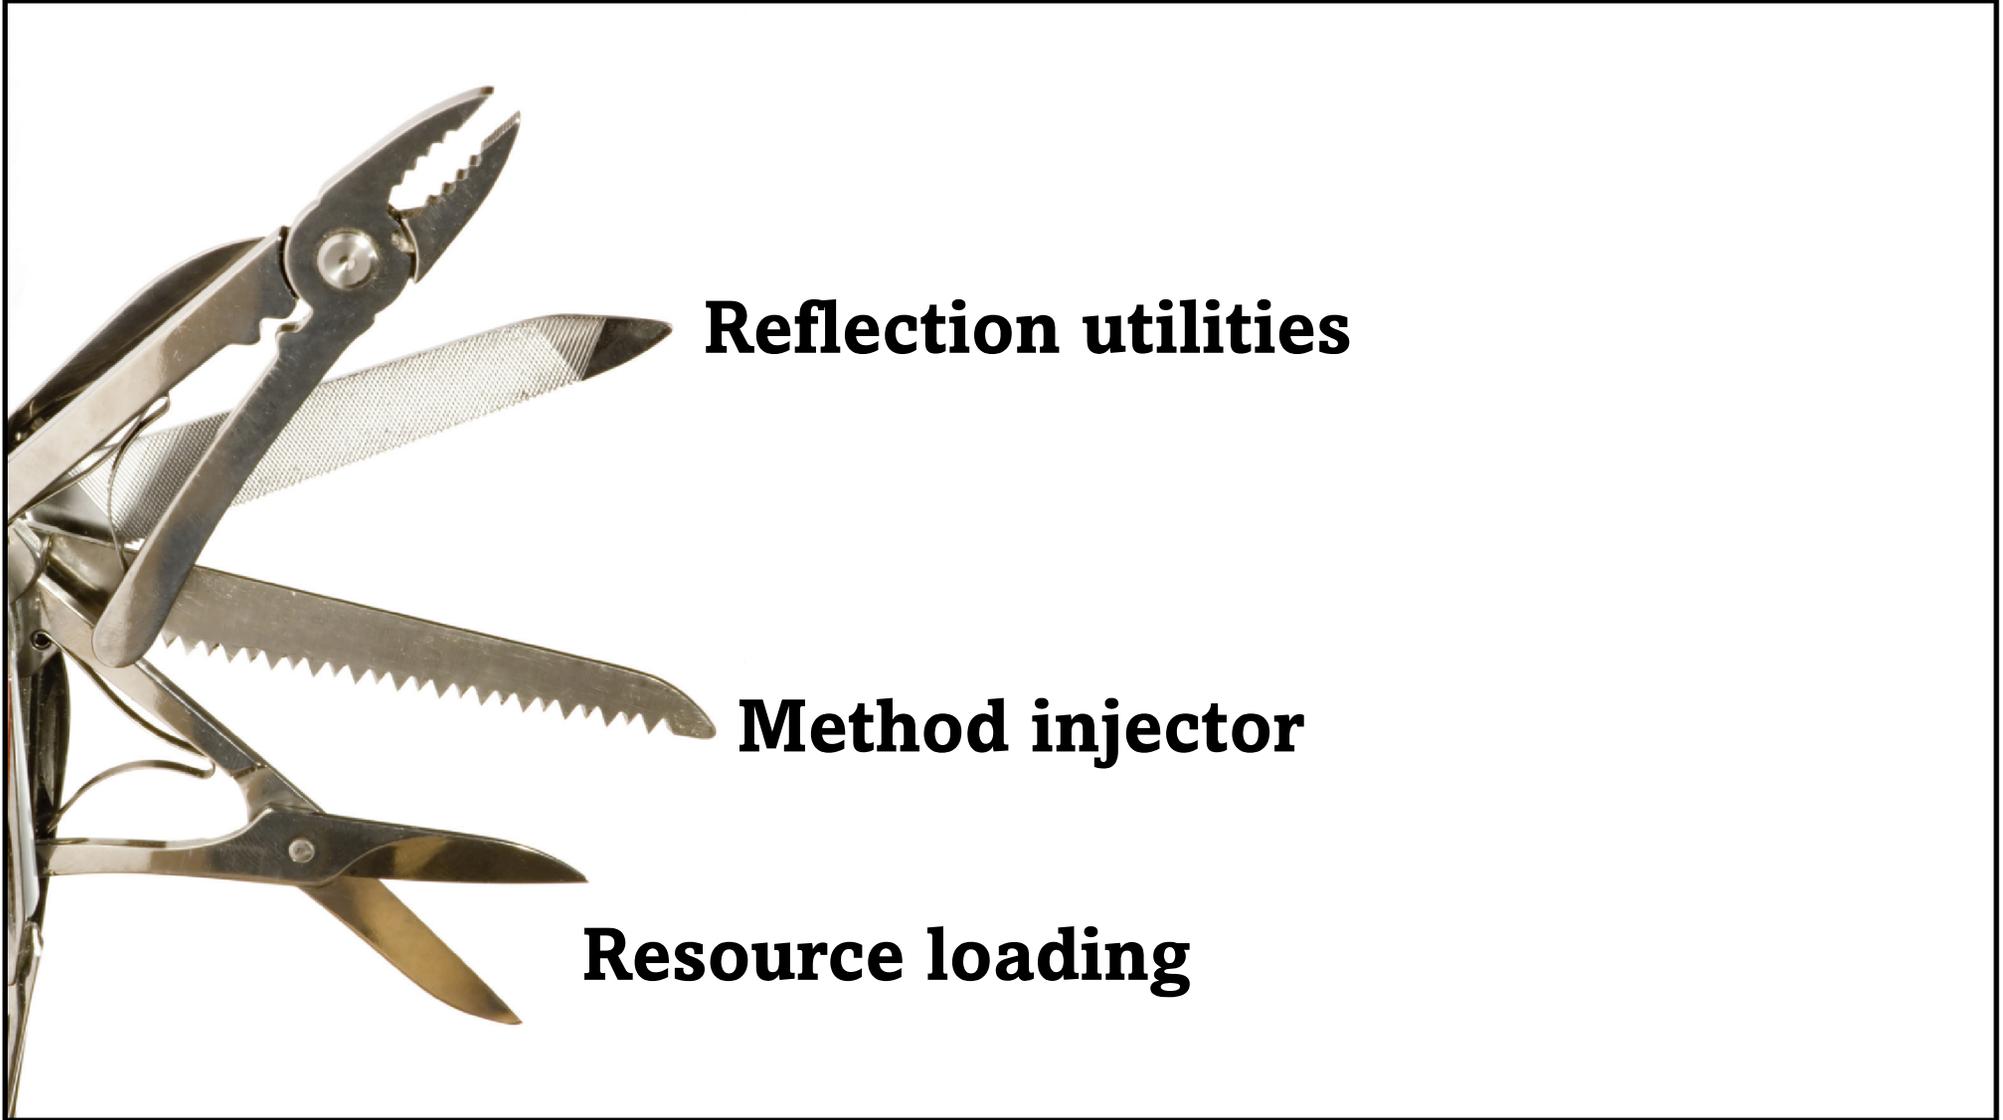

**AnnotatedType builder**

**Bean builders**

**Annotation inspectors**

**Annotation literals**

**Reflection utilities**

**Method injector**

**Resource loading**

**I gotta  
have my  
XML.**

**Seam Config: XML-based bean  
metadata**

**define  
customize  
wire**

A man wearing a black suit, white shirt, black tie, and glasses, also wearing an orange hard hat. He is holding a large folder or document in front of him.

**I gotta  
have my  
XML.**

**"Type-safe"**

**Reference fully qualified  
types**

**Import packages via XML  
namespaces**

Bean registration control

Tweaking an injection point

Annotation aliasing

Implicit object producer

Event bridge

Interceptor bindings

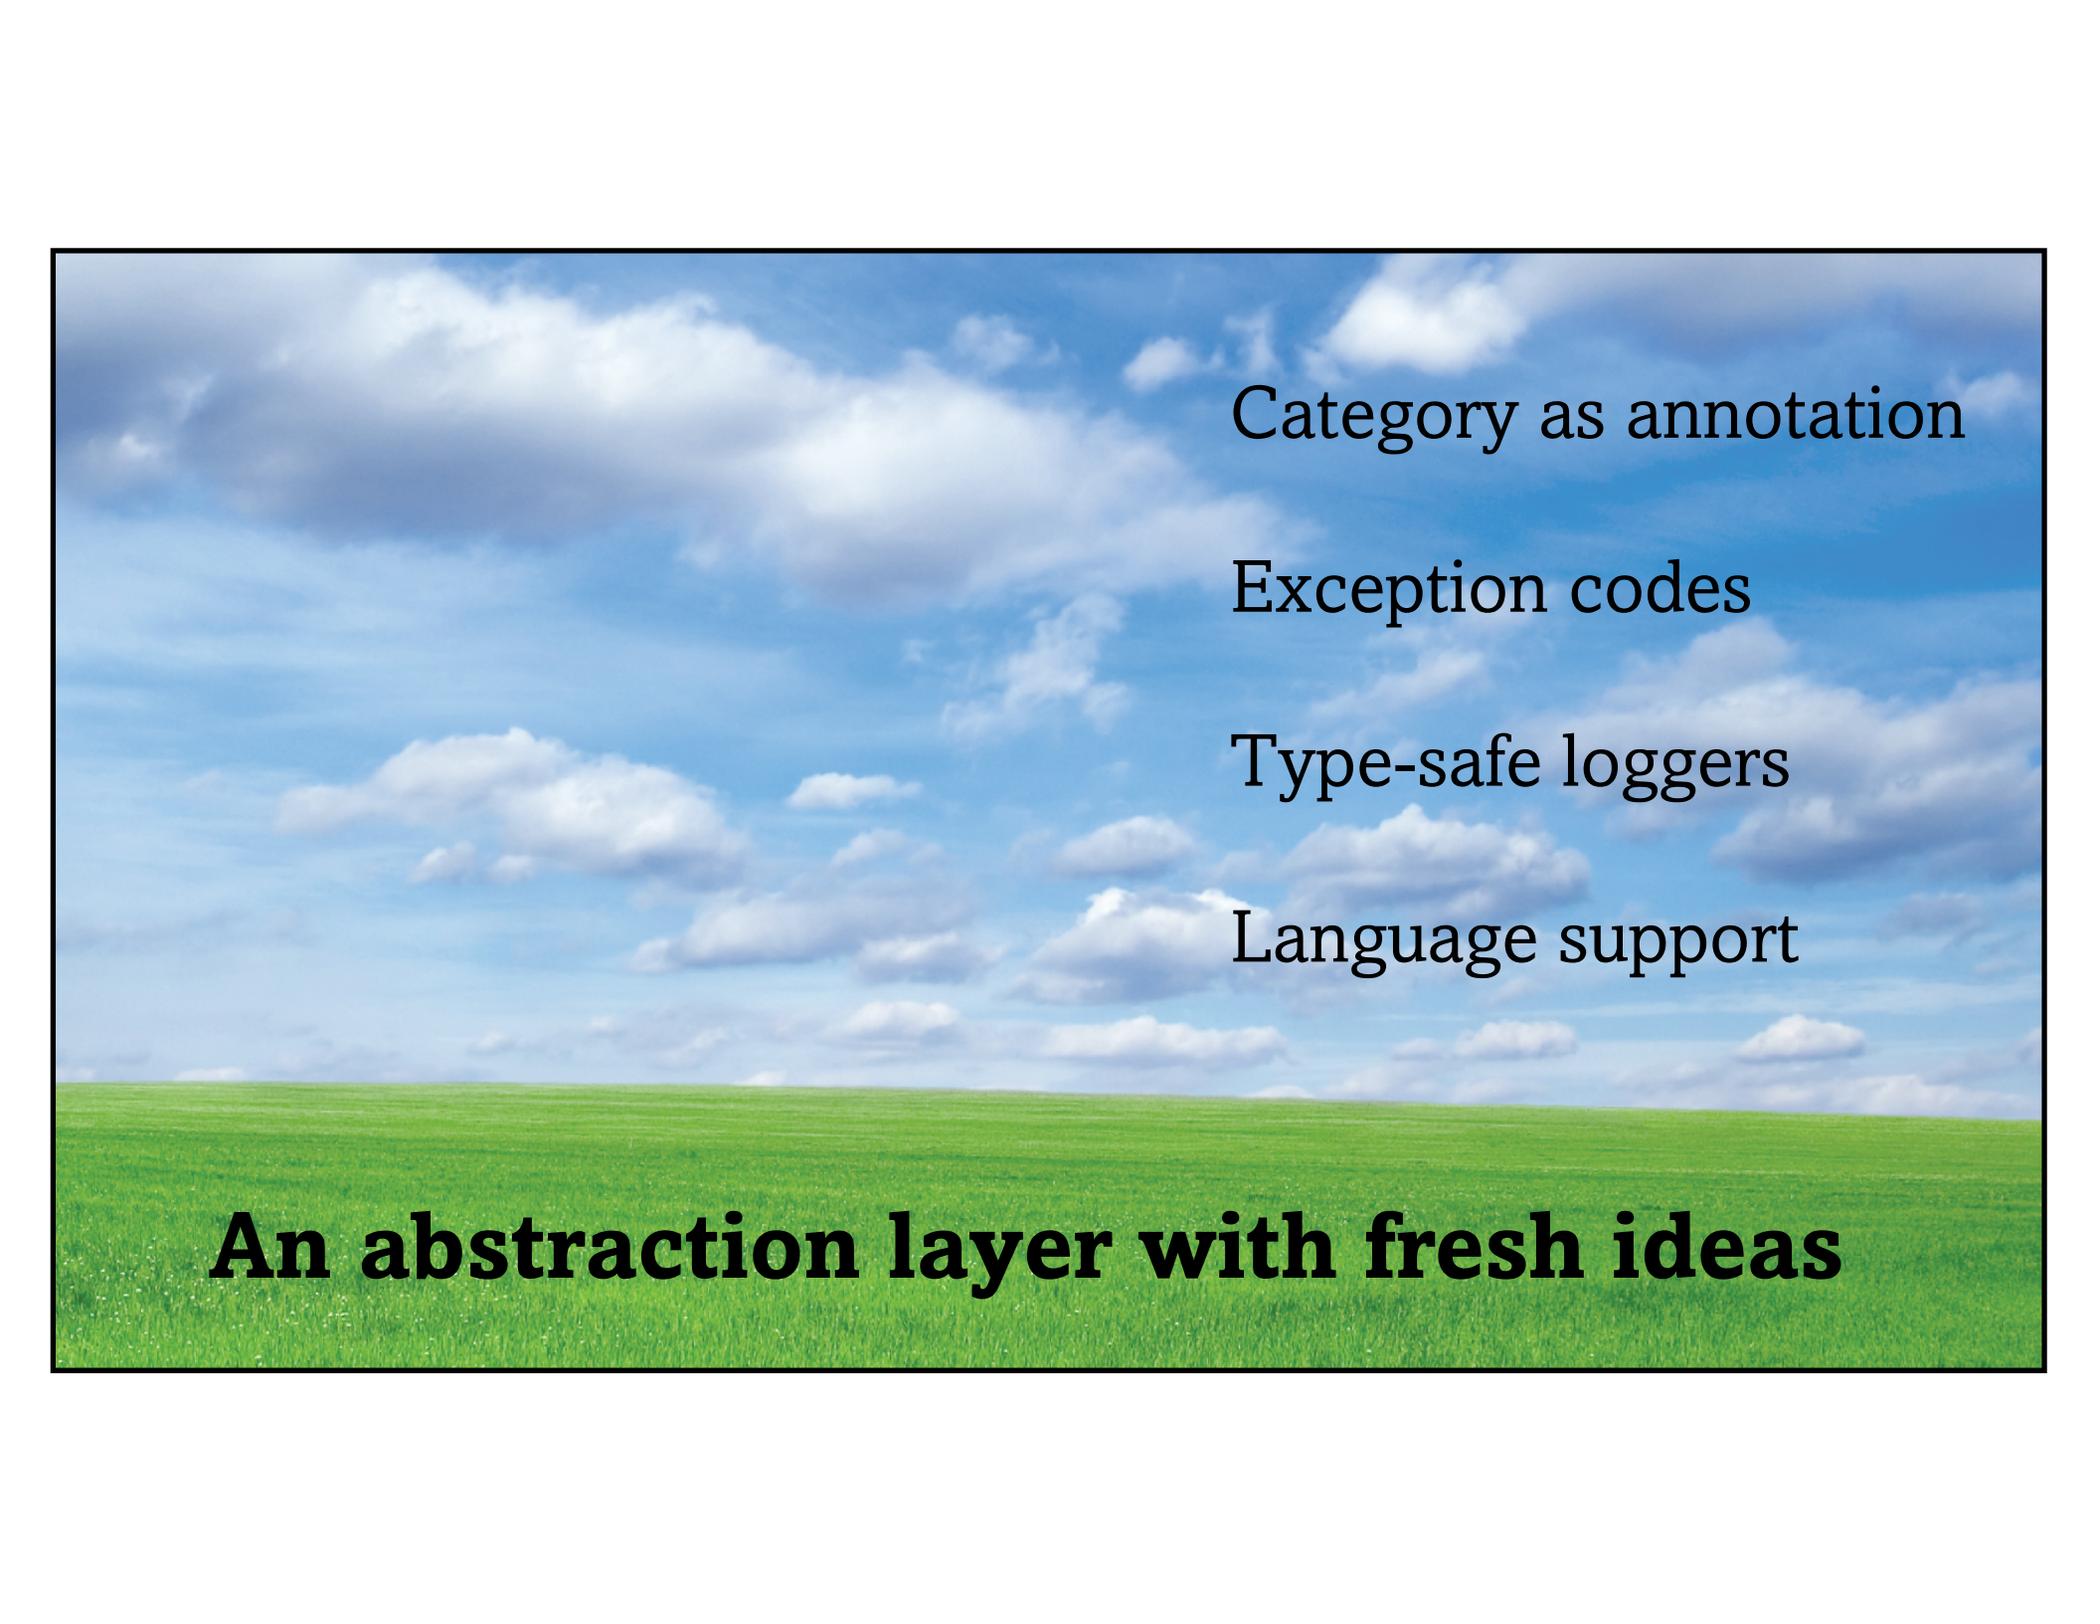

Declarative behavior via interfaces

Additional scopes

Framework integration

# Reinventing Logging

A landscape photograph showing a vast green field in the foreground and a bright blue sky with scattered white clouds in the background. The text is overlaid on the right side of the image.

# Who's writing extensions?

Seam 3 project - <http://seamframework.org/Seam3>  
MyFaces CODI - [http://www.irian.at/myfaces\\_codi](http://www.irian.at/myfaces_codi)  
SoftwareMill - <https://github.com/softwaremill/softwaremill-common>

**Now you are!**

List your extension @  
<http://tinyurl.com/cdi-extensions>

**CDI** combines loose coupling with strong typing.

**CDI** makes Java EE flexible, portable and extensible.

**CDI** extensions make Java EE competitive and awesome!
