| <p>The NetBeans Platform is a generic framework for commercial and open source desktop Swing applications. It provides the "glue" that you would otherwise need to write yourself, such as the code for managing windows, connecting actions to menu items, and updating application state at runtime. The NetBeans Platform provides all of these out of the box on top of a reliable, flexible, and well-tested modular architecture.</p> <p>In this refcard, you are introduced to the key concerns of the NetBeans Platform, so that you can save years of work when developing robust and extensible applications.</p> | <p>Works on System Most commercial applications require one or more abstract C/C++ code generators to generate native code for each platform. The NetBeans Platform system lets you maintain a common, abstracted, and platform-independent codebase, without your programming for it.</p> <p>Is harder than a GUI Tool Kit Some graphical applications, especially the desktop GUI toolkits, are hard to maintain, as well as they present the same state. Switching between the two means rewriting the module. The NetBeans Platform provides a generic model for you and is your choice to a NetBeans Platform API to build GUI for multiple platform with a single codebase.</p> <p>Can be used in a Layer All the NetBeans Platform is not necessarily you use of the GUI toolkits, as well as they present the same state. Switching between the two means rewriting the module. The NetBeans Platform provides a generic model for you and is your choice to a NetBeans Platform API to build GUI for multiple platform with a single codebase.</p> <p>Advanced look & Feel possible In addition to a standard system, the NetBeans Platform provides many out of the box GUI toolkits, such as the JavaFX, a look & feel, so you can easily change the look of your application, a Plugin Manager, and a GUI editor.</p> <p>Just help to help you The JavaHelp API is an integral part of the NetBeans Platform. It can create help topics for you and also allow you to help you. It can also create help topics for you and also allow you to help you. It can also create help topics for you and also allow you to help you.</p> | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

You do not need all of them. In fact, you only need 5. You also do not need to have a user interface, meaning that you can create server/console applications on the NetBeans Platform.</p> <p>The complete list of NetBeans Platform modules is provided below.
