What a Crazy Year It's Been!

Henrik Ståhl  
Sr. Director, Product Management  
Java Platform Group

# Who am I?

- NOT Stål-Henrik\*
  - Not even if you're a 14 year old female fan
  - Or the Director of Programming at Swedish Television
  - Definitely not if you're a journalist looking for an interview
  - I have non-listed home phone number to avoid being called by the categories above. Yes, really.
  - If you try to google me, try adding "Java" to the search terms to avoid getting hits for Stål-Henrik
- NOT an actor
  - Which means I don't have to pretend that I'm good on stage!

(\*) Footnote for non-Swedes: Superman is "Stålmannen" in Swedish. Stål-Henrik is a parody of Stålmannen for children's television. I get mistaken for him from time to time. Must be my good looks.

Source: SVT

# Ok, but who am I really?

- Steps towards the Dark Side
  - 1998, left a research position at KTH to become a Consultant
  - 2005, left JRockit engineering behind for product management
- But I have some nice sides too
  - Considered giving up the IT career to become a Flamenco guitarist
  - Responsible for Java platform product strategy
  - Stubbornly working to get Oracle to do the Right Thing (tm) for Java and the Java Community
  - And your host today!

## Why are We Here Today?

- Summarize the first year of Oracle Java Stewardship
- Ask our three Impartial Judges to score Oracle's performance
- All very objectively, of course
- Plus a sneak peak on our vision for the grand future!

### European Commission may delay Sun-Oracle merger

by Lance Whitney

Font size Print E-mail Share 6 comments

Tweet 0 submit

The European Commission could delay its decision on the **Sun-Oracle deal** beyond Thursday's deadline to further investigate antitrust issues, **reported Reuters**, citing sources familiar with the situation.

Apprehensive about Oracle gaining control of Sun's widely used MySQL database, the Commission's antitrust regulators are currently debating whether to OK the deal by Thursday, the report said. If the Commission launches a full review, it could take as long as four months before a decision is reached, according to Commission rules.

The U.S. **Department of Justice** recently cleared the merger. But the Justice Department's concerns centered more on licensing issues with Sun's Java software than MySQL.

### Oracle Outlines Plans for Sun Products, Casts Doubt on NetBeans

Posted by **ScuttleMonkey** on Monday November 09 2009, @03:44PM  
from the oracle-grinding-a-fresh-new-roast dept.

An anonymous reader writes to tell us that a recent FAQ released by Oracle outlines the plans for many of Sun's popular products like GlassFish, MySQL, and NetBeans. Many are worried at some of the possible avenues the decisions outlined could lead to, especially with respect to NetBeans.

"What should have happened, Oracle should not have missed a beat and should have announced work on Oracle plugins for NetBeans and active Oracle support of NetBeans. This type of announcement would have brought a large and some-what skeptical NetBeans community much closer to Oracle. It

Oracle's top brass might have [committed](#) to merging its Java technology with that of Sun Microsystems but the specifics are still being worked out.

The plan on how to merge Oracle's JRockit Java Virtual Machine (JVM) and Sun's HotSpot JVM is "still evolving", Oracle principal engineer Mark Reinhold has said.

Leads from two JVM's engineering teams are "spending lots of quality time together" Reinhold told an Oracle Technology Network webcast audience, but he admitted "it's not an easy problem taking the best of each [JVM] and figuring out the long-term convergence."

**EclipseCon 2010** Oracle is committed to whipping the Java Community Process into shape, but it looks like a limited workout's on the agenda.

Steven Harris, the senior vice president of Oracle's massive application server product development, told EclipseCon Wednesday that the Java Community Process (JCP) - the body officially responsible for making changes to Java - needs to be "tweaked" so that Java could become more responsive to changing needs. Oracle is a long-standing member of Eclipse.

**Time to move on...**

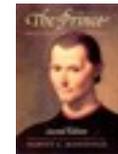

Friday April 9, 2010

Yes, indeed, the rumors are true: I resigned from Oracle a week ago (April 2nd). I apologize to everyone in St Petersburg who came to TechDays on Thursday expecting to hear from me. I really hated not being there. As to why I left, it's difficult to answer. Just about anything I could say that would be accurate and honest would do more harm than good. The hardest part is no longer being with all the great people I've had the privilege to work with over the years. I don't know what I'm going to do next, other than take some time off before I start job hunting.

This is the new home of my blog. It contains all of my old blog entries from Sun: Sun's blogging policy gave bloggers rights to their own works. The few more recent blog entries that I did at blogs.sun.com were written under somewhat more strict policies :-)

## Oracle puts a JRockit under its cloud play

**BEA. Oracle. Complete.**

By **Gavin Clarke in San Francisco** • [Get more from this author](#)

Posted in [Software](#), 19th April 2010 21:22 GMT

Oracle has updated its cloud infrastructure play with data-center technology that puts Java on the metal.

On Monday, the database giant said that WebLogic Server can now run on Oracle VM without an operating system thanks to a piece of software called JRockit Virtual Edition. The combination is available in a new suite called WebLogic Suite Virtualization Option.

JRockit Virtual Edition handles operating-system features such as interaction with hardware devices and file I/O and speeds up performance by removing features not considered essential for running the kinds of Java applications that use WebLogic.

# August 13<sup>th</sup> – Just in time for JavaOne

The screenshot shows the Ars Technica website interface. At the top is the 'ars technica' logo. Below it is a navigation bar with categories: ALL, APPLE, ASK ARS, BUSINESS, GADGETS, GAMING, MICROSOFT, OPEN SOURCE, SCIENCE, and TECH. Underneath are sub-categories: NEWS, GUIDES, and REVIEWS. A banner for 'Law & Disorder' is visible, with the tagline 'Tech law and policy in the digital age'. The main article is titled 'Oracle sues Google over use of Java in Android' by Eric Bangeman, last updated 5 months ago. The article text begins: 'In a tersely worded press release, Oracle announced that it was suing Google for patent and copyright infringement over its use of the Java programming language for Android development. Neither the press release nor the complaint filed in the US District Court for Northern California go into any significant detail.'

# August 19<sup>th</sup>

The screenshot shows a web page from 'DEVELOPER\_WORLD WITH JAVAWORLD'. The navigation bar includes links for News, Blog, White Papers, Webcasts, Test Center, and Technologies. The breadcrumb trail reads: InfoWorld Home / Developer World / Fatal Exception / Why Oracle was right to sue Google. The article is by Neil McAllister, dated August 19, 2010. The title is 'Why Oracle was right to sue Google' and the subtitle is 'Oracle's Android lawsuit is just the first step in the long-awaited resurrection of the Java platform'. There are 22 comments and a print option. The article text begins with: 'The tech industry loves a good vendor slugfest, and the upcoming legal battle between Google and Oracle has all the makings of a truly spectacular one. At issue is Dalvik, the unique, Java-based runtime at the heart of Google's Android smartphone OS. Oracle, which gained stewardship of the Java platform when it bought Sun Microsystems in 2009, claims Dalvik knowingly, willfully, and deliberately infringes on Java intellectual property. According to a complaint filed with the U.S. District Court in San Francisco last week, Oracle is seeking a halt to any further Android development, destruction of all infringing Android software, and for Google to pay damages, both actual and statutory.'

## Apple's OpenJDK project to bring Java SE 7 to the Mac

By Jacqui Cheng | Last updated 2 months ago

When Apple said last month that it was **deprecating its version** of the Java runtime, some worried about Java's future on Mac OS X. Worry no more: Apple has announced that it's partnering with Oracle to bring Java SE 7 to Mac OS X as part of the OpenJDK project.

In October, Apple said that its most recent release of Java SE 6 was officially deprecated. That meant that Apple wouldn't guarantee that its version of the Java runtime would stick around in future releases of Mac OS X, and that it would no longer be maintained at the same level as it had been in the past. Despite this, Apple said in Friday's announcement that Java SE 6 will remain available in Snow Leopard and the upcoming release of Lion (Mac OS X 10.7).

## Tomt svar när Oracle möter Javakritik

Av Niklas Andersson |

**Apache Software Foundation har hotat Oracle med att rösta emot nästa version av Java. Oracle manar till samarbete.**

Bråket handlar om Oracles regler för mjukvaran som testas om en Javaimplementation lever upp till specifikationen eller inte.

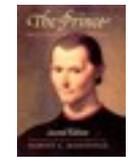

Enligt Apache Software Foundation som utvecklar Javaimplementationen Harmony gör regelverket det omöjligt att släppa Harmony under den öppna licensen Apache License.

Apache hävdar regelbrott och säger att Oracles licens strider mot jsps (Java Specification Participation Agreement). Apache hotar med att rösta mot nästa version av Java, och uppmanar andra att göra detsamma.

ORACLE

November 19<sup>th</sup>

The screenshot shows the developer.com website interface. At the top, there is a search bar and navigation links for Developer, Open Source, Database, Web Services, Other, Mobile, Security, and Microsoft & .NET. Below the navigation, the date is February 8, 2011, and there are hot topics for Java, Open Source, PHP, Web Services, and Database. A breadcrumb trail shows Developer.com > Java, with a link to Read More in Java. The main article title is "Java 7 and 8 Begin to Take Shape: What's In, What's Out?". The article is dated November 19, 2010, and is by Sean Michael Kerner. The article text states that Oracle has submitted release content for both Java SE 7 and 8 to the Java Community Process (JCP) for approval before the end of the month. It also mentions that JSR (Java Specification Request) 336 details the components and features that will become JDK 7, while JSR 337 details JDK 8. The final Java 7 release is being targeted for mid-2011, while Java 8's release is set for 2012.

from the zomg-i-m-posting-a-java-story dept.

ORACLE

## Quotes from the future (1)

It was a real eye-opener for me when I realized I could deploy my little applet hack to any device I could think of that had a GUI. Sure, I won't write AngryBirds in Java anytime soon but it really lives up to its promise for cross-platform development.

## Quotes from the future (2)

With the new language interop features in JDK 9, I can write a **JRuby** program that makes calls to a **Java** library which in turn integrates with a decades old backend system written in **Cobol**, all without boilerplate code. Oh, and did I mention that the presentation layer is written in **JavaScript**. Way cool!

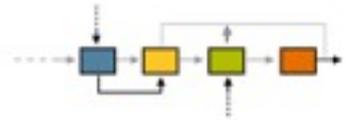

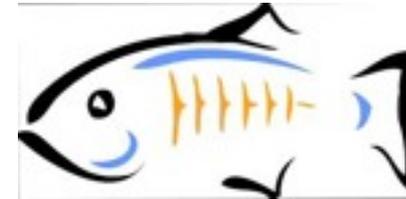

## Quotes from the future (3)

It was hardly a surprise that Oracle would add features that make integrating with a SQL database this easy. What is impressive is that the data bindings are so generic that I can integrate with pretty much whatever data source I have simply by installing a service provider, or write my own if I feel adventurous. XML files, RSS feeds, name/value based stores including Amazon S3. You name it. Oh, and the development tools very nicely display the available schema and allow simple click-and-drag wiring to the new Java Client. It just works.
