Provisioning the IoT

Paul Bakker - @pbakker

Sander Mak - @sander_mak

Luminis Technologies

Today's goals

- 1. Put IoT provisioning into context
- 2. Demo: modular provisioning
- 3. Apache ACE

servers

Cloud/SaaS:

- full control
- reliable network
- VM/Containers

servers

mobile

Cloud/SaaS:

- full control
- reliable network
- VM/Containers

App stores:

- walled garden
- semi-reliable network
- full binaries

IoT

Provisioning?

'Just download latest binaries over FTP at system startup'

Provisioning wishlist

Modularity

Efficiency

Automation

Security

Feature composition Remotely toggle features Bandwidth efficient Avoid unnecessary updates Manage many devices Insight: what runs where? Not just any device

IoT!=IoT

We are not talking about millions of devices:

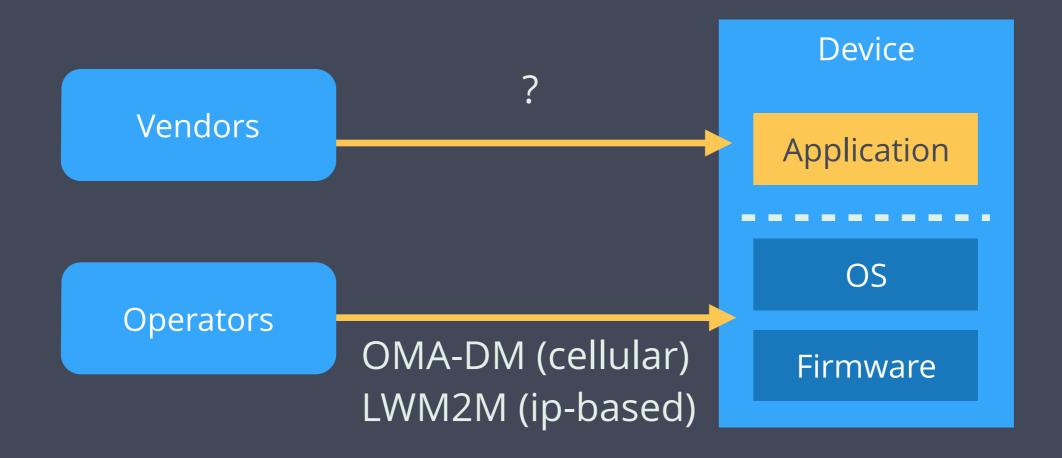

IoT!=IoT

We are not talking about millions of devices:

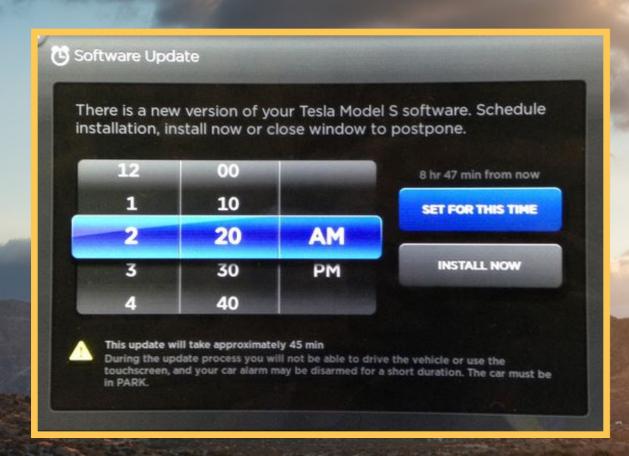

This talk is not about device management

IoT Provisioning standards

Mostly about device management

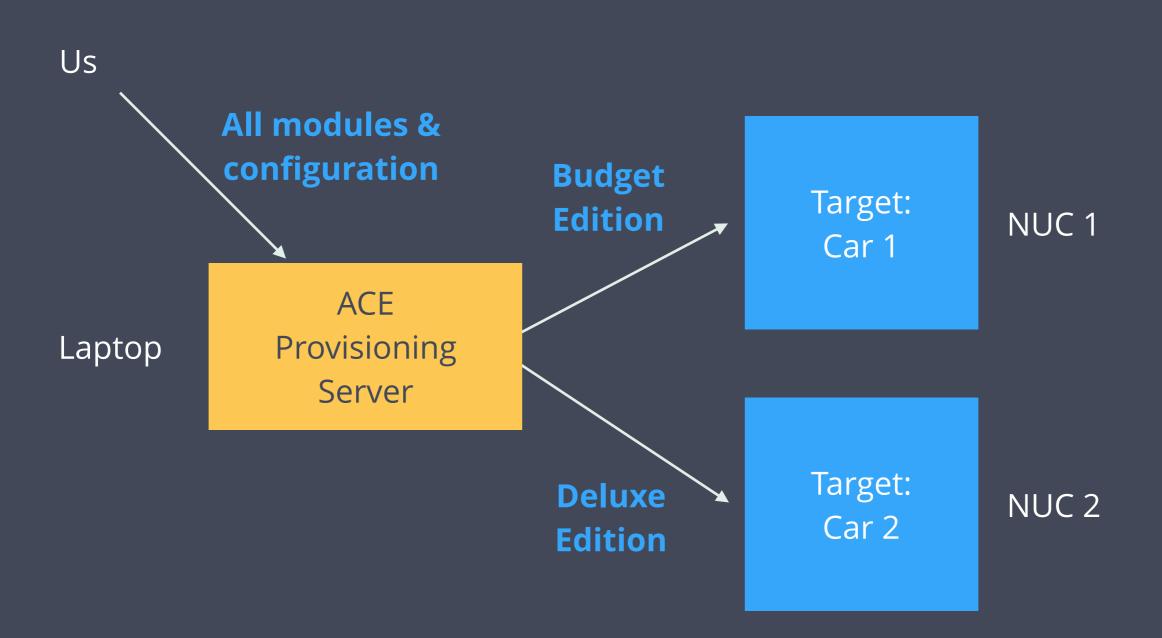

Demo time!

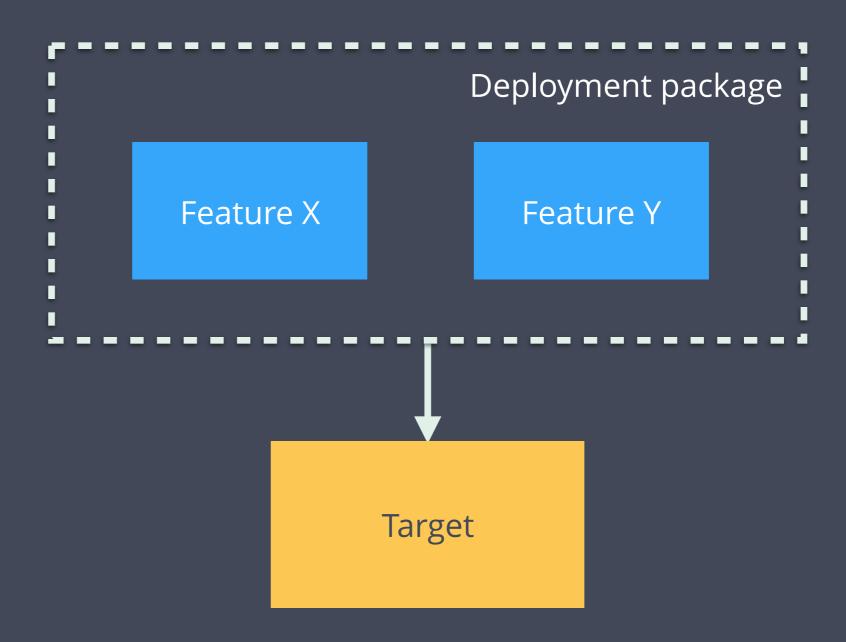

Provisioning demo

ACE Car Entertainment

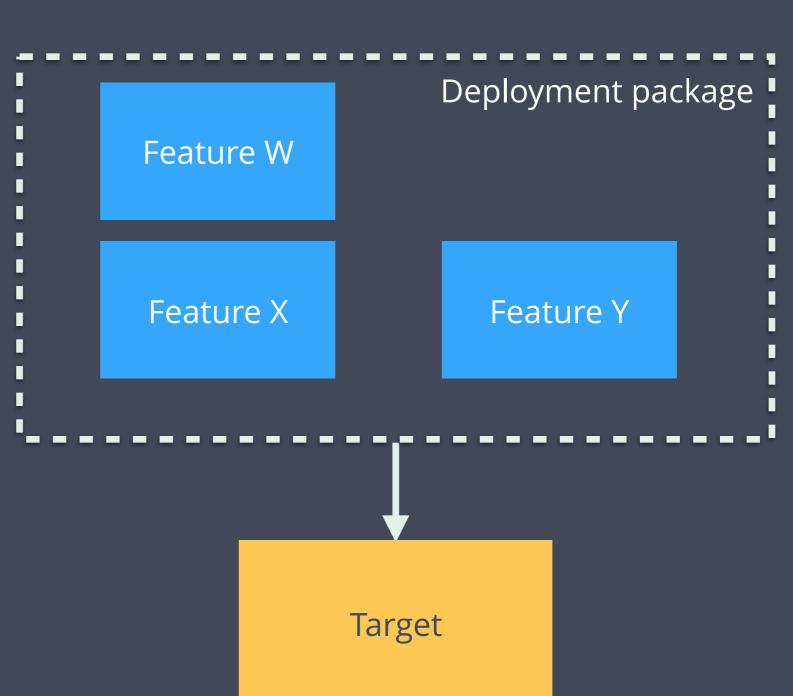

Monolithic deployment: installation

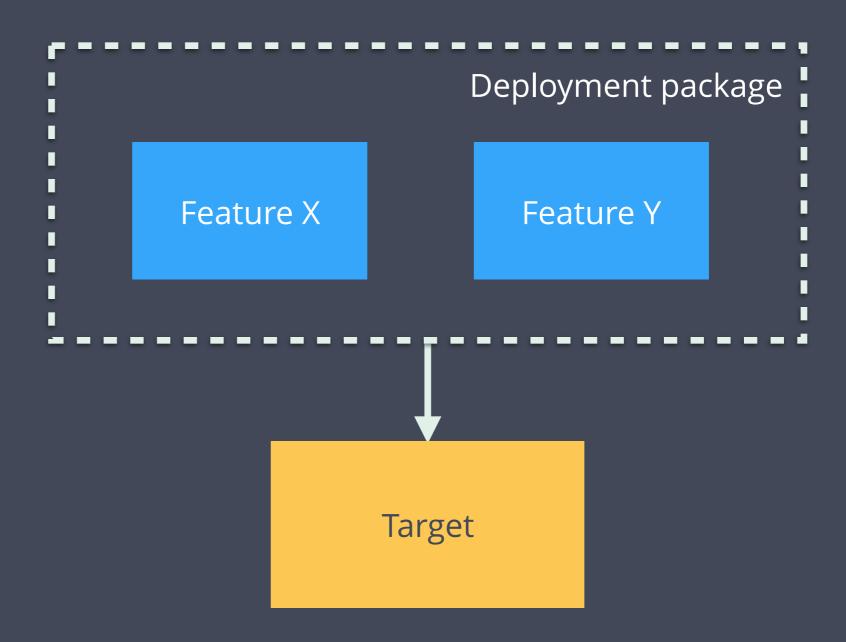

Monolithic deployment: update

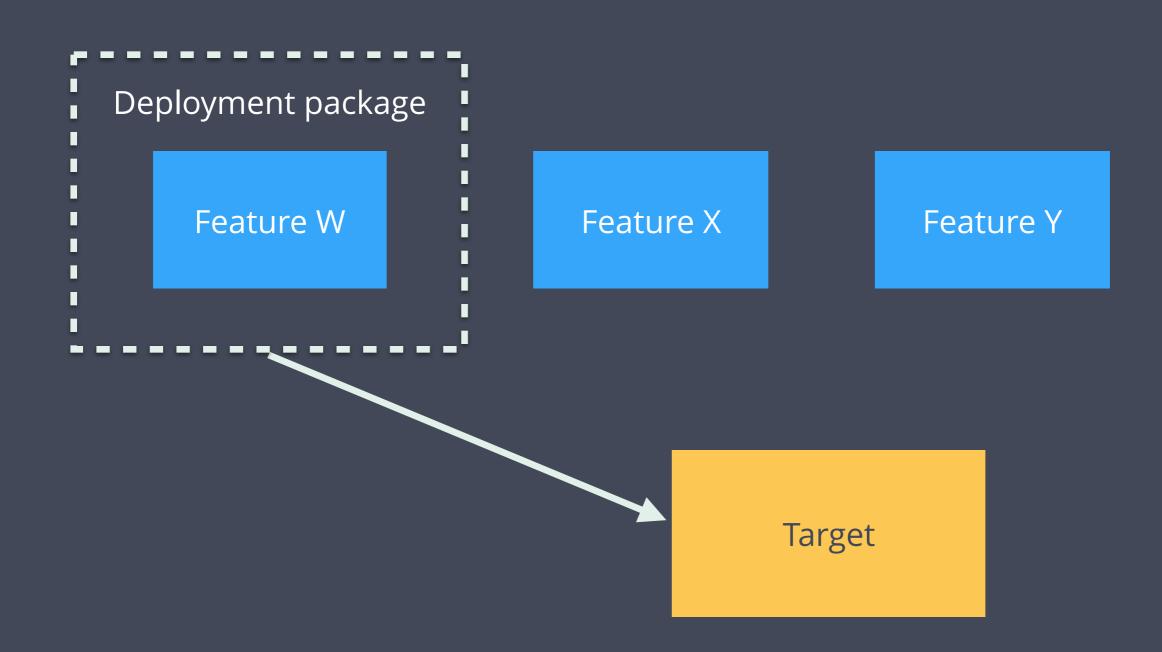

Limited connectivity
Bandwidth inefficient

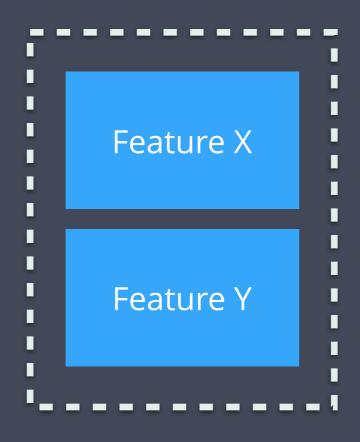

Modular deployment: installation

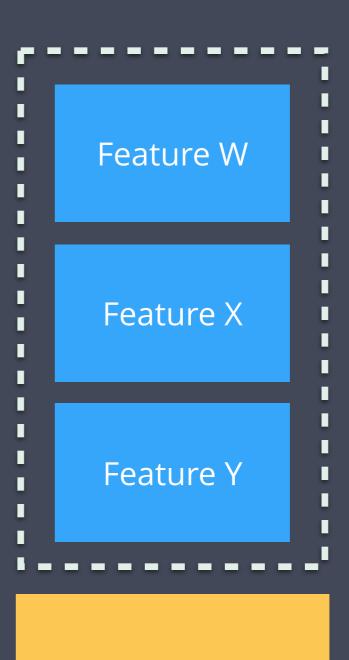

Modular deployment: update

Differentiate with ease

Target 1

Target 2

How?

De facto standard for Java modularity Small footprint

Dynamic service model

music v1.0.0

dashboard v1.0.0

phone v1.0.0

OSGi runtime (it's just Java!)

JVM

Hot-swap bundles

music v1.0.0

dashboard v1.0.0

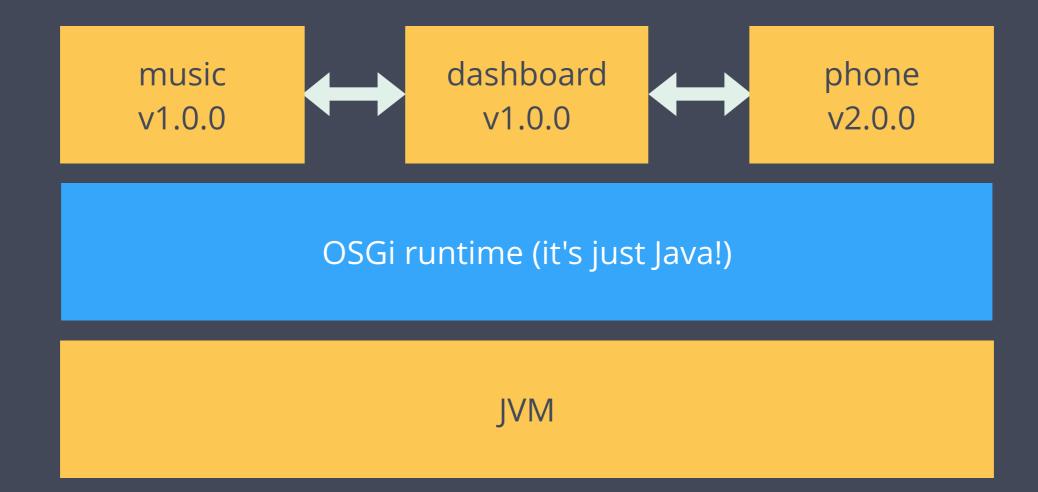

phone v2.0.0

OSGi runtime (it's just Java!)

JVM

Dependencies explicit in bundle metadata

Service registry

App?

PhoneApp

music v1.0.0

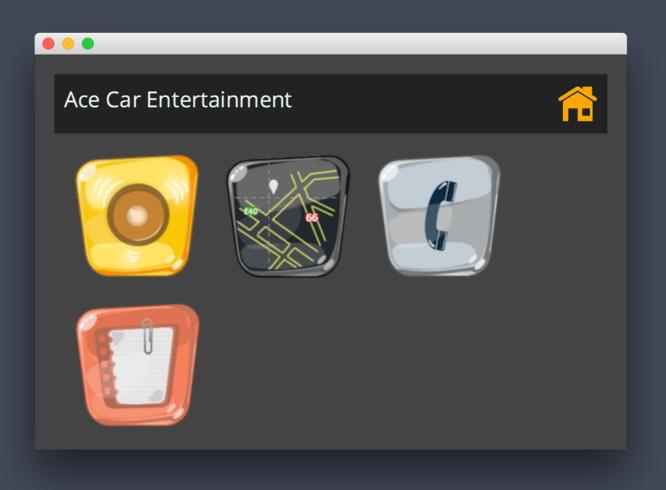

dashboard v1.0.0

phone v2.0.0

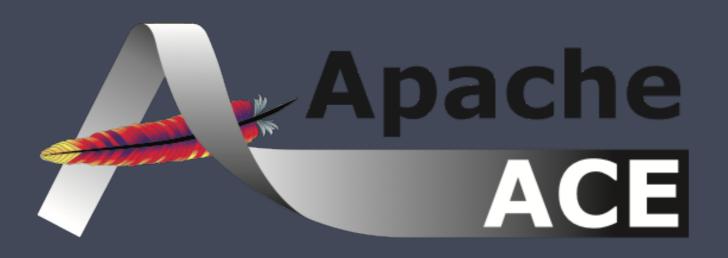

OSGi runtime (it's just Java!)

JVM

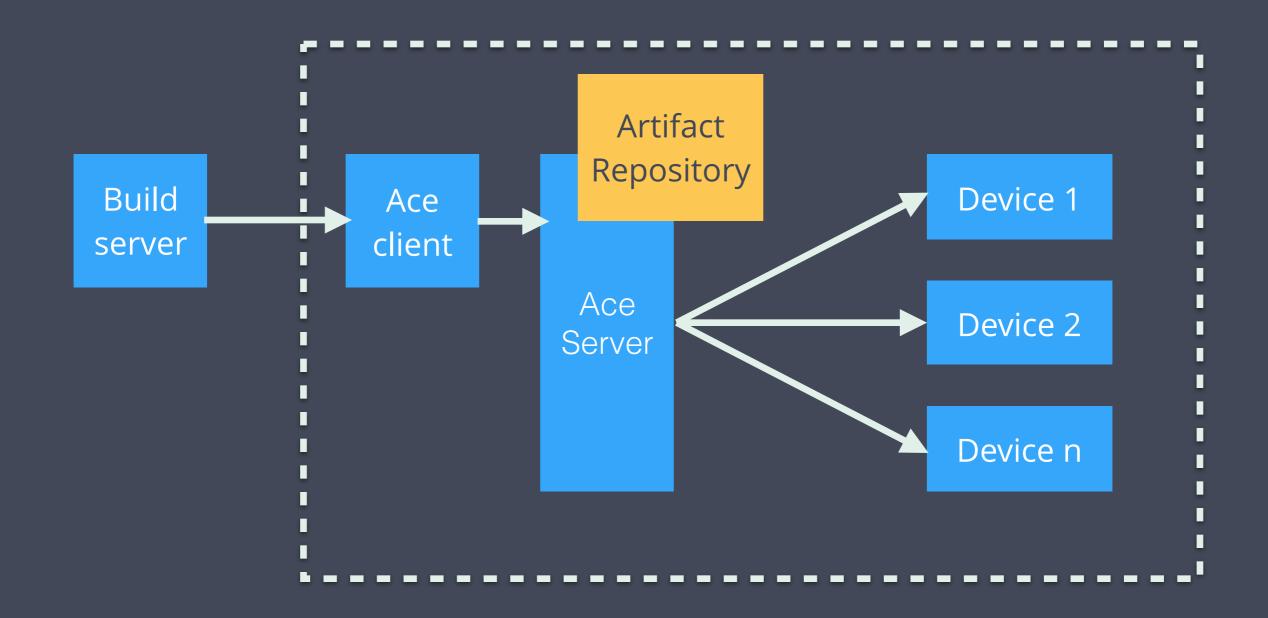

Demo code

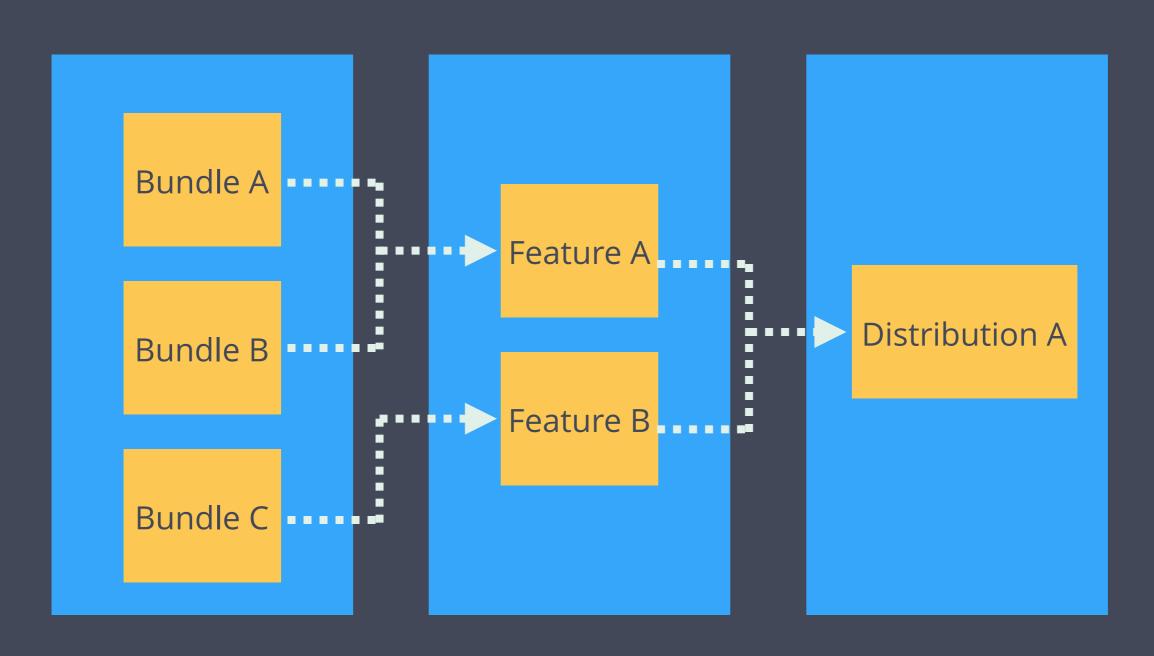

Code @ bit.ly/carprov

Device/target

Management agent bundle

JVM/OSGi framework

Operating System

Polls ACE server for updates

Deployment packages sent back

- Any JVM capable device
- Target has unique id
- Configure server location

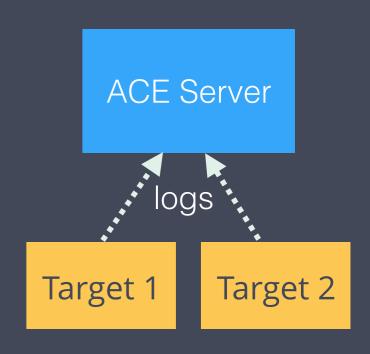

Security:

- Explicit target registration
- ▶ HTTP auth or SSL Client Certificates

Process:

- Manual update approval
- Custom properties
- Audit logs

REST

GET /work/{id}/feature

Java API

workspaceMgr.cw().lf()

Gogo script

scriptable OSGi shell, calls (low-level) Java API

Deployment packages

Structure

GET /deployment/car1/versions/3.0.0

- arprov.dashboard.api-1.0.0.jar
- carprov.dashboard.impl-1.0.0.jar
- carprov.music-1.0.0.jar
- carprov.navigation-1.0.0.jar
- META-INF
 - MANIFEST.MF
- org.apache.felix.configadmin-1.8.0.jar
- org.apache.felix.dependencymanager-3.1.0.jar
- org.apache.felix.dependencymanager.runtime-3.1.0.jar
- org.apache.felix.dependencymanager.shell-3.0.1.jar
- org.apache.felix.eventadmin-1.3.2.jar
- org.apache.felix.gogo.command-0.12.0.jar
- org.apache.felix.gogo.runtime-0.10.0.jar
- org.apache.felix.gogo.shell-0.10.0.jar
- org.apache.felix.log-1.0.1.jar
- org.apache.felix.metatype-1.0.6.jar

META-INF/MANIFEST.MF

Manifest-Version: 1.0

DeploymentPackage-SymbolicName: car1

DeploymentPackage-Version: 3.0.0

Name: carprov.dashboard.impl-1.0.0.jar

Bundle-SymbolicName: carprov.dashboard.impl

Bundle-Version: 1.0.0

Name: org.apache.felix.dependencymanager-3.1.0.jar

Bundle-SymbolicName:

org.apache.felix.dependencymanager

Bundle-Version: 3.1.0

•••

Deployment packages

Installation on target

Transactional: retries and rollback

Installation status in audit log

- Unreliable networks:
 - Download instead of stream
 - Resumable downloads
 - Custom update strategies

ACE Extensibility

- Built on modular OSGi architecture
- Different repository implementations
- Custom update strategies on targets
- Multiple topologies (e.g. relay server)
- ResourceProcessors for new artifact types

ACE Extensibility

ResourceProcessor

- Recognizes your artifact type
- Handles installation on target
- Upload ResourceProcessor to ACE

ACE Extensibility

Configuration ResourceProcessor

- Handles XML (MetaType) configs
- Placeholders replaced with target tags

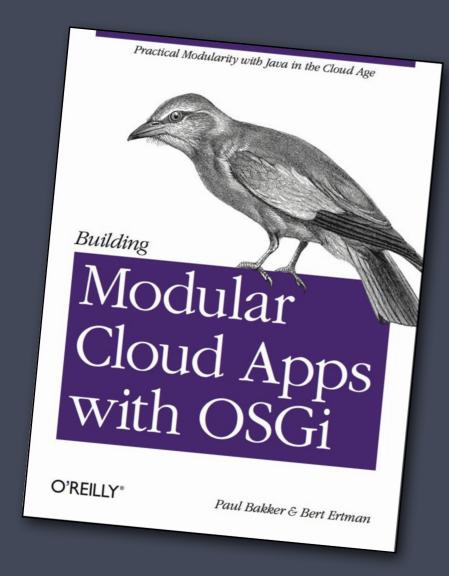

In summary

Apache ACE simplifies IoT deployments

Modular applications rock!

Modular deployment is worth your while

Thank you!
